📋 Daily Work Progress Report

Name: Ishimwe Serge

Position: Frontend Developer

Date: 24 October 2025

📝 Introduction

Today, I worked on the **Aby Booking Platform**, focusing on the **Company Side Menu Management System**. The main goal was to enable restaurant companies to easily manage their **menu categories** and **menu items**, ensuring a smooth and intuitive process for organizing and displaying their offerings.

✅ Key Tasks Completed

1. 🍽️ **Menu Item Management for Companies**

- Developed functionality allowing each company to **add new menu items** directly from their dashboard.
- Created responsive input forms for entering details such as item name, price, description, and image.
- Integrated the form with the backend API to store and retrieve real-time menu data.
- Ensured that companies can edit or delete menu items when needed.

2. 📁 **Menu Category Management**

- Implemented a feature that allows companies to **create categories** for their menu items (e.g., Starters, Main Dishes, Desserts, Drinks).
- Designed a clean interface for adding, editing, and deleting categories.
- Ensured categories are automatically linked to their respective company accounts for proper data organization.

3. 🔗 **Assigning Items to Categories**

- Added the functionality to **assign menu items to specific categories**, improving organization and user browsing experience.
- Created a dynamic dropdown system that lists available categories when adding new menu items.
- Ensured real-time updates — when a company adds a category, it immediately becomes selectable for menu item assignment.

4. 😊 **UI & User Experience Enhancements**

4. 🎨 **UI & User Experience Enhancements**

- Refined the design of the company dashboard for easier navigation and data entry.

- Ensured responsive layouts across devices (desktop, tablet, and mobile).

- Conducted testing to confirm that the menu system works seamlessly without reload issues or data loss.

📚 Summary

The new **Menu Management System** on **Aby Booking** enables restaurant companies to:

- 🍽 **Add, edit, and delete menu items** with full control.

- 📁 **Create and manage menu categories** for better organization.

- 🔗 **Assign items to specific categories**, providing a structured and easy-to-browse restaurant menu.

These updates make Aby Booking more powerful and user-friendly for restaurants, giving them full control over how their menus appear to customers while maintaining a modern and efficient interface.
